

Senior NOC/DevOps Engineer

Are you passionate about devOps, Cloud Solutions and Agile operations of IoT Services? Do you bring the heart and mind of a startup mentality? Do you want to work with cutting edge B2B solutions together with a team of 20 rock stars in the busy global Internet of Things space - then this is the job for you.

The newly established role as Senior NOC/DevOps Engineer will own and drive the Network Operating Center and DevOps toolchain. As the customer base and number of connected sensors grow you will together with our core team develop and manage the NOC and devOps toolchain.

Your responsibilities will be to:

- Monitor and Control operation of the Yanzi IoT Platform
- Together with the development and test/QA team continuously develop the NOC and devOps process
- Ensure stable operation of Yanzi IoT services
- Handle third line technical support

You will report directly to the Head of Operations of Yanzi Networks and you will work from the Yanzi Head Quarters based in Kista, Sweden.

Competencies:

- Driven, pro-active and focused on the solutions
- Committed and passionate about agile system operation
- Positive and a responsible team player
- Tolerant to stress and rapid changes
- Structured and analytical
- Fluent in English, both writing and speaking

Experience:

- Docker, Jenkins and Kubernetes (Required)
- Technical documentation in English
- Azure, Bluemix, AWS
- JavaScript/HTML/CSS, XML
- Unix/Linux (Required)
- Google Cloud Platform
- VM deployment
- System and software test

Education:

- Master of Science or equivalent studies
