yanzi

Senior Software/Java Engineer

Are you passionate about software development, finding solutions and driving system architecture? Do you bring the heart and mind of a startup mentality? Do you want to work with cutting edge B2B solutions together with a team of 20 rock stars in the busy global Internet of Things space - then this is the job for you.

Yanzi is expanding its core engineering team and is looking for an experienced software engineer with relevant Java knowledge. You should have worked with software system design, software architecture and Java backend programming, preferably within both larger and smaller development projects.

Your responsibilities will be to:
• Develop and take ownership of scalable, robust and maintainable software
• Lead sub systems development of the Yanzi IoT Platform
• Propose improvements of design/architecture where relevant
• Mentor junior developers
• In a team deliver high quality products

You will report directly to the Engineering Manager of Yanzi Networks and you will work from the Yanzi Head Quarters based in Kista, Sweden.

Competencies:
• Driven, pro-active and focused on the solutions   - Tolerant to stress and rapid changes
• Committed and passionate about system development   - Structured and analytical
• Positive and a responsible team player   - Fluent in English, writing and speaking

Experience:
• More than 10 years of software development (Required)   - Java (Required)
• Docker, Jenkins and Kubernets   - System and software test
• Technical documentation in English   - C and embedded programming
• Distributed systems and network programming   - Unix/Linux
• JavaScript/HTML/CSS, XML   - ObjectiveC/iOS and Android

Education:
• Master of Science or equivalent degree

Are you interested in applying for the role?

Send your CV and a personal letter to: marie.lassborn@yanzinetworks.com

About Yanzi Networks

Yanzi Networks has developed an open, fast, robust and evolutionary software and networking platform for IoT.
