Yanzi receives order from University of Parma

The University of Parma in Italy has chosen the Yanzi Internet-of-Things sensor network for their state-of-the-art research in building smart cities in an efficient and sustainable way.

The research project will utilize the Yanzi Internet-of-things hardware and software as a development and test bed for the Internet-of-Things.

About University of Parma

The University holds 18 Departments, 35 first degree courses, 6 one-cycle degree courses, 38 second degree courses, as well as many Postgraduate schools, Postgraduate Teacher Training courses, several Masters' Degrees and Research Doctorates (PhD). The ideal size of the University (30,000 students, with more than 5,000 graduates per year, and about 2000 faculty and staff members) and the living conditions in Parma attract a large number of students from all over Italy. More than two-thirds of the registered students come from outside of Parma and the Parma Province, which places the University in the highest rankfor attracting the most non-resident students nationwide.

Yanzi – Internet your things!

With the Yanzi Internet-of-things software platform, service providers can connect billions of things to millions of users to create new exciting services and revenue streams. The cloud service delivery platform allows users to wirelessly connect devices in a true Plug & Play fashion (Patent Pending). The Yanzi software is based on open standards and makes Internet-of-things dramatically easier to develop and deploy. Our mission is to deliver real and robust Internet-of-things solutions to the customers in a record-short time to improve their business performance.Key market applications are; remote site management, smart lighting, smart & secure home and smart cities. The technology is available globally through a network of professional systems integrators and leading service providers. For additional information please visit yanzi.se.
